

Summer 2025

Editor Overview

Dear JACOT Readers,

We hope all of our readers are well and enjoying your summer.

We are pleased to share that JACOT has received a small grant through the *University of Minnesota - Institute of Advanced Studies (IAS)* to cross reference and digitally index (doi) all past, current, and future articles. This is a great step in our visibility and access goals as an open access journal. We continue to strive for vetted evidence that is relevant and sound for practitioners to use in practice. As editors, we will be working on this process over the next 6 months.

In the **Summer 2025 issue** researchers provide you with insights on integration of a new post-intensive care based tool for intensive care use, the application of the Model of Human Occupation (MOHO) in a unique neurological case, and an education topic featuring simulation as an educational approach to prepare students for level II fieldwork in acute care. We encourage all readers to also view this issue's editorial focused on evidence to support occupational therapy role in vestibular rehabilitation (VR) within acute practice, with an emphasis on occupational therapy efforts for VR in the emergency department.

We thank all of our readers and followers for supporting this evidence-based resource and look forward to providing an enduring evidence-based resource for occupational therapy practitioners to promote their work in the practice area of acute care. We invite all occupational therapy practitioners to be an active reader, promoter, and investigator for JACOT.

Best regards,

Hannah Oldenburg, EdD, OTR/L, BCPR
